

SYSTEM AND METHOD FOR MANAGING MESSAGES AND ANNOTATIONS PRESENTED IN A USER INTERFACE

Abstract of the Disclosure

16 A user may select an error message presented in a graphic user interface and bring up a word processor by which text describing the error and its solution may be entered. This is saved, and the next time the error is encountered, the saved annotation is available for presentation to and further editing

21 by the user. In this manner, the developer may continually improve the quality and usefulness of the error messages.
